

# MICROSOFT WINDOWS 11 24H2

PACKAGING TUTORIAL: Different system versions have different packaging methods. The packaging process includes: "Language pack: add, associate, delete", "Drive: add, delete", "Cumulative update: add, delete", "InBox Apps: add, Update, mark" etc.

There are many hidden stories hidden behind this. If you want to unlock these, are you ready to start trying to encapsulate them?

# Version History:

- 1. Microsoft Windows 11 23H2, Outdated
- 2. Microsoft Windows 11 24H2, Outdated, Current
- 3. Microsoft Windows 11 25H2, Latest

### Summary

Chapter 1 Encapsulation

Chapter 2 Common problem

Chapter 3 Known issues

Chapter 3

D.

Chapter 2

### Chapter 1 Encapsulation

#### A. Prerequisites

# II Running system

1. When using the DISM command to create a higher version image

When the operating system you are running is Windows 10 or lower than Windows 11 24H2, in some cases, using the DISM command to create a higher version image will cause some unknown problems. For example, when running the DISM command in the Windows 10 operating system to process the Windows Server 2025 offline image, you may receive an error message during the packaging process: "This application cannot run on your computer." Solution:

- 1.1. Upgrade the running operating system or reinstall to a higher version (recommended);
- 1.2. Upgrade or install a new version of ADK or PowerShell (not recommended)
  - 1.2.1. You can try to upgrade to the latest PowerShell 7 or higher version;
  - 1.2.2. After installing the latest version of ADK and replacing the DISM command, the problem of low DISM version can be solved. However, the command line mainly used by the packaging script is the PowerShell command line, so it is not recommended that you use the above method. The best method is to upgrade the running operating system or reinstall to a higher version.

### 2. Disk partition

- 2.1. After mounting an offline image to a REFS disk partition, some DISM commands may fail to execute properly. NTFS disk partitions are not affected by this.
- 2.2. After the ISO is decompressed, its location is not affected by the REFS partition.
- 3. N ways to speed up Windows operating system

When processing packaging tasks, installing cumulative updates, installing drivers, and installing applications in InBox Apps, a large number of temporary files will be generated. The following methods can be used to speed up the system:

- 3.1. Turn off Windows Security Center
  - Turning on Windows Security Center will scan files and take up a lot of CPU.
  - During the test: It took 1 hour and 22 minutes before it was turned off, and 20 minutes after it was turned off.

# How to turn off:

Green is the command line, hold down the Windows key and press R to launch Run.  $\,$ 

- 3.1.1. Open Windows Security Center or run: windowsdefender:
- 3.1.2. Select "Virus & threat protection" or run: windowsdefender://threat
- 3.1.3. Find "Virus and Threat Protection Settings", click "Manage Settings" or run: windowsdefender://threatsettings. It is recommended that you turn off some features:
  - 3.1.3.1. Real-time protection
  - 3.1.3.2. Cloud-provided protection
  - 3.1.3.3. Automatically submit samples
  - 3.1.3.4. Tamper Protection

3.1.4. When not in the package, it is recommended that you turn on Windows Security Center.

#### 3.2. Turn off virtualization-based security

Even after closing Windows Security Center, virtualization-based security is still running, and the system running speed will be greatly reduced. The speed improvement is obvious after closing it.

### 3.2.1. After running, restart your computer

dism /Online /Disable-Feature:microsoft-hyper-v-all /NoRestart

dism /Online /Disable-Feature:IsolatedUserMode /NoRestart

dism /Online /Disable-Feature: Microsoft-Hyper-V-Hypervisor /NoRestart

dism /Online /Disable-Feature:Microsoft-Hyper-V-Online /NoRestart

dism /Online /Disable-Feature: Hypervisor Platform / No Restart

mountvol X: /s

cmd /c copy /y %WINDIR%\System32\SecConfig.efi X:\EFI\Microsoft\Boot\SecConfig.efi

 $bcdedit/create \{0cb3b571-2f2e-4343-a879-d86a476d7215\}/d \ "DebugTool"/application osloader \ (a) the control of the control$ 

 $bcdedit/set \{0cb3b571-2f2e-4343-a879-d86a476d7215\}\ path \ ``LEFI\Microsoft\ Boot\ SecConfig.efi''$ 

bcdedit/set {bootmgr} bootsequence {0cb3b571-2f2e-4343-a879-d86a476d7215}

bcdedit /set {0cb3b571-2f2e-4343-a879-d86a476d7215} loadoptions DISABLE-LSA-ISO,DISABLE-VBS

 $bcdedit/set \{0cb3b571-2f2e-4343-a879-d86a476d7215\}\ device\ partition = X:$ 

mountvol X: /d

bcdedit /set hypervisorlaunchtype off

# 3.2.2. View Status

Run Msinfo32 and check the "Virtualization-based Security" status in the system summary.

# 4. ISO tools

Use a software that can edit ISO files, such as: PowerISO, DAEMON Tools, ISO Workshop;

# 5. Command line

- 5.1. Optional "Terminal" or "PowerShell ISE", if "Terminal" is not installed, please go to: https://github.com/microsoft/terminal/releases

  After downloading;
- 5.2. Open "Terminal" or "PowerShell ISE" as administrator, it is recommended to set the PowerShell execution policy: bypass, PS command line:

Set-ExecutionPolicy -ExecutionPolicy Bypass -Force

5.3. In this article, PS command line, green part, please copy it, paste it into the "Terminal" dialog box, press Enter and start running;

5.4. When there is .ps1, right-click the file and select Run with PowerShell, or copy the path and paste it into Terminal to run, the path with a colon, add the & character in the command line, example: & "D:\YiSolutions\\_Encapsulation\\_SIP.ps1"

#### II Requirements

1. System installation package

Keywords: iteration, cross-version, major version, cumulative update, initial release

#### 1.1. illustrate

- 1.1.1. Please re-create the image for each version update. For example, when jumping from 23H2 to 24H2, avoid other compatibility issues and do not create based on the old image;
- 1.1.2. The regulation has been clearly communicated to packagers in various forms by some OEMs, and direct upgrades from iterative versions are not allowed;
- 1.1.3. Please use "Initial Version" and "Developer Edition" for production. There was a brief appearance in the official Microsoft documentation that the initial version must be used in production, but this sentence was later deleted in the official documentation;
- 1.1.4. After installing the language pack, you must re-add the cumulative update (the same version number), and if you do not add the cumulative update, problems such as "garbled characters" and "interface flashback" will occur.
- 1.1.5. Evolution process: Windows 11 24H2, Build 26100.1742 + ( "KB5043080 Checkpoint Update" + "KB5044284 Monthly Cumulative Update" ) = OS Build 26100.2033
- 1.2. Prepare to download the initial or developer version
  - 1.2.1. x64
    - 1.2.1.1. Filename: en-us\_windows\_11\_consumer\_editions\_version\_24h2\_x64\_dvd\_1d5fcad3.iso

      List of files: https://files.rg-adguard.net/file/1ebf9c88-803f-636e-ad8a-5b60966dcd64
    - 1.2.1.2. Filename: en-us\_windows\_11\_business\_editions\_version\_24h2\_x64\_dvd\_59a1851e.iso

      List of files: https://files.rg-adguard.net/file/4bfa831a-0073-3bb4-5dde-6c07df68d7e3

      List of files: https://files.rg-adguard.net/file/d8ee9445-b9eb-5f45-f75e-e92a057820bf
    - 1.2.1.4. Filename: en-us\_windows\_11\_enterprise\_ltsc\_2024\_x64\_dvd\_965cfb00.iso

      List of files: https://files.rg-adguard.net/file/142ca376-487f-e858-a606-e120e70b9d02
    - 1.2.1.5. Filename: en-us\_windows\_11\_iot\_enterprise\_ltsc\_2024\_x64\_dvd\_f6b14814.iso

      List of files: https://files.rg-adguard.net/file/9160d5cf-f480-a1c9-a62c-b75ab0708d2c
  - 1.2.2. arm64
    - 1.2.2.1. Filename: en-us\_windows\_11\_consumer\_editions\_version\_24h2\_arm64\_dvd\_4cc70bf6.iso

1.2.2.2. Filename: en-us\_windows\_11\_business\_editions\_version\_24h2\_arm64\_dvd\_ad92e9d8.iso

List of files: https://files.rg-adguard.net/file/cfb08972-7f11-f3a5-ae7c-8f084dc1996e

1.2.2.3. Filename: en-us\_windows\_11\_iot\_enterprise\_version\_24h2\_arm64\_dvd\_e9155a10.iso

List of files: https://files.rg-adguard.net/file/bacf17e5-a307-5a01-1a35-71268dc0c2e3

1.2.2.4. Filename: en-us\_windows\_11\_iot\_enterprise\_ltsc\_2024\_arm64\_dvd\_ec517836.iso

List of files: https://files.rg-adguard.net/file/de2234af-1514-ff50-50af-5a3395549c42

1.3. After the sample download en-us\_windows\_11\_consumer\_editions\_version\_24h2\_x64\_dvd\_1d5fcad3.iso, Unzip to: D:\en-us\_windows\_11\_consumer\_editions\_version\_24h2\_x64\_dvd\_1d5fcad3

Note: Before decompressing to disk D, you should check whether it is a ReFS partition. If it is a ReFS partition, some DISM commands will fail. Solution: Please use a disk partition in NTFS format.

- 1.4. After decompression is complete, change the directory D:\en-us\_windows\_11\_consumer\_editions\_version\_24h2\_x64\_dvd\_1d5fcad3 change to D:\OS\_11
- 1.5. All scripts and all paths are set to D:\OS\_11 as the image source.
- 1.6. Installation configuration
  - 1.6.1. Learn: Windows Setup Edition Configuration and Product ID Files (El.cfg and PID.txt)
  - 1.6.2. Known issues
    - 1.6.2.1. When there is no Ei.cfg, ISO boot installation will report an error when selecting certain versions, prompting:
      Windows cannot find the Microsoft Software License terms. Make sure the installation sources are valid and restart the installation.
    - 1.6.2.2. How to solve it? Add ei.cfg to D:\OS\_11\Sources and create ei.cfg:

@"

[Channel]

volume

[VL]

1

"@ | Out-File -FilePath "D:\OS\_11\sources\EI.CFG" -Encoding Ascii

- 2. Language pack
  - 2.1. Learn

As you read, please understand the important highlights of "Blue".

- 2.1.1. Languages overview
- 2.1.2. Add languages to a Windows 11 image
- 2.1.3. Language and region Features on Demand (FOD)

#### 2.1.3.1. Fonts

- When adding a language pack, when the corresponding region is triggered, the required font functions need to be added, download "List of all available language FODs" learn more.
- In "Language Pack: Extract", the automatic recognition function has been added, and you can understand the functions: Function Match\_Required\_Fonts

### 2.1.3.2. Regional association

What are regional connections?

 When the image language is only in English, after adding the zh-HK language pack, the image language will not be added. You should install zh-TW first, and then install zh-HK to obtain the corresponding association.

#### Known regional associations:

- 2.1.3.2.1. Region: ar-sa, Optional associated areas: en-US, associated installation package:
  - 2.1.3.2.1.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab
  - 2.1.3.2.1.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab
- 2.1.3.2.2. Region: bg-bg, Optional associated areas: en-US, associated installation package:
  - 2.1.3.2.2.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab

#### 2.1.3.3. Other region-specific requirements

When triggering a known area, a specific "package" needs to be added.

### 2.1.3.3.1. Region: zh-TW

Package: Microsoft-Windows-InternationalFeatures-Taiwan-

Package~31bf3856ad364e35~amd64~~.cab

**Description:** Supplemental support for Taiwan date formatting requirements. Package will be provided to customers located in Taiwan.

**Recommendation:** Preinstall only on devices shipping to the Taiwan market. Not installing this capability on devices causes any API calls to that use the Taiwan calendar to fail.

#### THERE IS CONTROVERSY:

During the test, it was found that this package was not installed in the original image of Microsoft's
official original Windows 11 However, there are known issues in the recommended items. In the end, it is
consistent with the official Microsoft original version, and the packager can freely choose to install it. or
not.

#### 2.2. Language pack: Download

2.2.1. Download: https://software-static.download.prss.microsoft.com/dbazure/888969d5-f34g-4e03-ac9d-1f9786c66749/26100.1.240331-1435.ge\_release\_amd64fre\_CLIENT\_LOF\_PACKAGES\_OEM.iso

# 3. InBox Apps

3.1. Download: https://software-static.download.prss.microsoft.com/dbazure/888969d5-f34g-4e03-ac9d-1f9786c66749/26100.1742.240904-1906.ge\_release\_svc\_prod1\_amd64fre\_InboxApps.iso

 $List \ of \ files: https://files.rg-adguard.net/file/81c83696-3f5f-0ab8-1c0f-fffb59921b41$ 

# 3.2. Fix missing items

# 3.2.1. Microsoft.GetHelp

3.2.1.1. Download from Microsoft's official subscription website: 26100.1.240331-

1435.ge\_release\_amd64fre\_InboxApps.iso

List of files: https://files.rg-adguard.net/file/88595d91-89e4-df54-5e04-f83f45c1f3d5

After the download is complete, double-click to open or unzip to any location, find the following files in the [ISO]:\Package directory, and copy them to the Desktop:

**3.2.1.1.1.** Microsoft.GetHelp\_8wekyb3d8bbwe.appxbundle

# 3.2.1.2. If the file cannot be obtained, please download it manually:

3.2.1.2.1. Direct download

• https://github.com/ilikeyi/Solutions/raw/refs/heads/main/\_Learn/Download.Package/

### 3.2.1.2.2. Open the website: https://store.rg-adguard.net

3.2.1.2.2.1. a). Select a URL (link). b). Select a channel (RP). c). Enter keywords: https://www.microsoft.com/store/productId/9PKDZBMV1H3T

### 3.2.1.2.2.2. Search results:

Microsoft.GetHelp\_10.2302.10601.0\_neutral\_~\_8wekyb3d8bbwe.AppxBu

3.2.1.2.2.3. After downloading, save it to the "Desktop" and rename it:

Microsoft.GetHelp\_8wekyb3d8bbwe.appxbundle

#### Warning

- The installation version number of Microsoft.GetHelp\_8wekyb3d8bbwe.appxbundle provided in the 26100.1742.240904-1906.ge\_release\_svc\_prod1\_amd64fre\_InboxApps.iso file is: 10.2407.22193.0. After installing this version number, it cannot run normally.
- The version number provided in the initial version of Windows 11 24H2 26100.1742 is: 10.2302.10601.0. Installing this version number can run normally.

#### 3.2.2. Microsoft.HEVCVideoExtension

26100.1742.240904-1906.ge\_release\_svc\_prod1\_amd64fre\_InboxApps.iso does not contain the Microsoft.HEVCVideoExtension\_8wekyb3d8bbwe.appxbundle installation package file, which can be obtained in the following ways:

3.2.2.1. Download from Microsoft's official subscription website: X23-75752\_HEVCappxbundle.img

List of files: https://files.rg-adguard.net/file/d6624138-77bb-13c1-9766-47b6b5e5864b

- 3.2.2.1.1. After the download is complete, double-click to open or unzip to any location. There will be a file named latest\_Microsoft.HEVCVideoExtension\_8wekyb3d8bbwe.appxbundle.zip.
- 3.2.2.1.2. Unzip latest\_Microsoft.HEVCVideoExtension\_8wekyb3d8bbwe.appxbundle.zip to the Desktop
- 3.2.2.1.3. After decompression, you will get the following files:
  - o 15a6383d188a454ca98e15931ce48dc4\_License1.xml
  - o Microsoft.HEVCVideoExtension\_8wekyb3d8bbwe.appxbundle
  - o AUMIDs.txt
  - o MPAP\_15a6383d188a454ca98e15931ce48dc4\_001.provxml
- 3.2.2.2. If the file cannot be obtained, please download it manually:
  - ${\tt 3.2.2.2.1.} \qquad {\tt Microsoft.HEVCVideoExtension\_8wekyb3d8bbwe.appxbundle}$ 
    - 3.2.2.2.1.1. Direct download
      - https://github.com/ilikeyi/Solutions/raw/refs/heads/main/\_Learn/Dow nload.Package/Windows.11.24H2/Microsoft.HEVCVideoExtension\_8w ekyb3d8bbwe.appxbundle

 https://archive.org/download/microsoft.-hevcvideo-extension-2.0.61931.0-neutral-8wekyb-3d-8bbwe\_20231114/Microsoft.HEVCVideoExtension\_2.0.61931.0\_neutral\_~\_8wekyb3d8bbwe.zip

After downloading, save it to the "Desktop" and unzip it to get the file:

Microsoft.HEVCVideoExtension\_2.0.61931.0\_neutral\_~\_8wekyb3d8bb

we.AppxBundle, rename it:

Microsoft.HEVCVideoExtension\_8wekyb3d8bbwe.appxbundle

### 3.2.2.2.1.2. Open the website: https://store.rg-adguard.net

3.2.2.2.1.2.1. a). Select a URL (link). b). Select a channel (RP). c). Enter keywords:
https://www.microsoft.com/store/productId/9N4WGH0Z6
VHQ

3.2.2.2.1.2.2. Search results:

Microsoft.HEVCVideoExtension\_\*.appxbundle

3.2.2.2.1.2.3. After downloading, save it to the "Desktop" and rename it:

Microsoft.HEVCVideoExtension\_8wekyb3d8bbwe.appxbun

#### 3.2.2.2. License

#### 3.2.2.2.1. Pre-saved licenses

Package/Windows.11.24H2/15a6383d188a454ca98e15931ce48dc4\_Licens
e1.xml

- 3.2.3. After downloading through the above method, you will get the following 4 files:
  - **3.2.3.1.** Microsoft.GetHelp\_8wekyb3d8bbwe.appxbundle
  - 3.2.3.2. Microsoft.GetHelp\_8wekyb3d8bbwe.xml
  - 3.2.3.3. Microsoft.HEVCVideoExtension\_8wekyb3d8bbwe.appxbundle
  - **3.2.3.4.** 15a6383d188a454ca98e15931ce48dc4\_License1.xml
- 3.2.4. Use ISO editing tools to edit 26100.1742.240904-1906.ge\_release\_svc\_prod1\_amd64fre\_InboxApps.iso and add the prepared files to the [ISO]:\packages directory;
- B. Language Pack: Extract

II Language pack: Ready

Mount 26100.1.240331-1435.ge\_release\_amd64fre\_CLIENT\_LOF\_PACKAGES\_OEM.iso or unzipped to any location;

- III Language pack: Scheme
  - 1. Add
    - 1.1. Language name: Simplified Chinese China, Region: zh-CN, Scope of application: Install.Wim, Boot.Wim, WinRE.Wim
  - 2. Delete
    - 2.1. Language name: English United States, Region: en-US, Scope of application: Install.Wim, Boot.Wim, WinRE.Wim
- IV Execute the extract command
  - Auto = automatically search all local disks, default;
  - Customize the path, for example, specify the E drive: \$ISO = "E:\"
  - Extract.ps1
    - o \Expand\Extract.ps1
    - o https://github.com/ilikeyi/solutions/blob/main/\_Learn/Packaging.tutorial/OS.11/24H2/Expand/Extract.ps1
  - Copy the code

# 4.2. Offline image language: change

- Starting Windows 11, the default System UI Language set by DISM is left unaltered on all editions except for Home edition. For all commercial editions the language chosen during the Out-of-Box Experience (OOBE) is set as the System Preferred UI language and Windows will be displayed in this language and for Home edition the language chosen at OOBE will continue to be the default System UI Language.
- As of Windows 10, version 2004, if an .appx-based Language Experience Pack (LXP) backed language is passed as an
  argument then the language will be set as the System Preferred UI language and its parent language will be set as the Default
  System UI language. In prior versions only .cab based language packs were supported.
- 4.2.1. Change default language, regional settings, and other international settings

```
Region: zh-CN
```

Dism /Image:"D:\OS\_11\_Custom\Install\Install\Mount" /Set-AllIntl:zh-CN

4.2.2. View available language settings

 $\label{lem:linstalllnstall} Dism / Image: "D:\OS\_11\_Custom\Install\Install\Mount" / Get-Intlem: Custom (Install) / Install ($ 

- 4.3. Components: All packages installed in the image
  - 4.3.1. View

Get-WindowsPackage -Path "D:\OS\_11\_Custom\Install\Install\Mount" | Out-GridView

### 4.3.2. Export to csv

Get-WindowsPackage -Path "D:\OS\_11\_Custom\Install\Install\Mount" | Export-CSV -NoType -Path \$SaveTo

Write-host \$SaveTo -ForegroundColor Green

# 5. InBox Apps

### 5.1. Learn

### 5.1.1. DISM App Package (.appx or .appxbundle) Servicing Command-Line Options

Important:

DISM /add-provisionedappxpackage Starting in Windows 10 version 1803, when using this option, you can preinstall apps without pinning them to the Start menu /region. When preinstalling an app, you can choose to exclude the app from LayoutModification.xml so that the app will install successfully and not appear as a Start menu tile. If no region list is specified, the app will only be provisioned when it is pinned to the Start layout.

Again, you are warned that using the command line to add must add the parameter: /Region

### 5.2. InBox Apps: Pre-install the application

5.5. Installing "Local Language Experience Packs (LXPs)" to offline images marks: installed languages

Before you learn about installed language tags, first understand the list of languages available in the ZuneMusic app: en-us, en-gb, as-in, az-latn-az, bs-latn-ba, bn-in, cs-cz, cy-gb, ar-sa, de-de, af-za, am-et, da-dk, el-gr, es-es, es-mx, ca-es, ca-es-valencia, eu-es, fi-fi, bg-bg, ga-ie, et-ee, gl-es, gu-in, gd-gb, fil-ph, fr-ca, fr-fr, hy-am, fa-ir, hu-hu, id-id, it-it, ja-jp, hr-hr, ka-ge, is-is, he-il, hi-in, kk-kz, lo-la, km-kh, lt-lt, kn-in, kok-in, ko-kr, mk-mk, lv-lv, ms-my, mi-nz, mr-in, mt-mt, ne-np, nl-nl, nb-no, ml-in, nn-no, lb-lu, or-in, ro-ro, sk-sk, ru-ru, pl-pl, quz-pe, pt-br, pt-pt, sq-al, ta-in, th-th, sv-se, pa-in, sr-cyrl-ba, sr-cyrl-rs, sr-latn-rs, ur-pk, ug-cn, tr-tr, uk-ua, tt-ru, zh-cn, vi-vn, uz-latn-uz, sl-si, zh-tw, te-in

View installed languages for offline images

Dism /Image: "D:\OS\_11\_Custom\Install\Install\Mount" /Get-Intl

View results Installed languages: en-US, zh-CN. When installing the ZuneMusic app, the installer will match "Installed Languages" and automatically filter the list of uninstalled languages. This is the language tag.

5.6. Offline image has language tag installed: How to add it

To mark the offline image: Language has been installed, there are two methods. The first is to install Microsoft-Windows-Client-Language-Pack\_x64\_zh-cn.cab, and the second is to install "Local Language Experience Pack (LXPs)". Microsoft official Windows 10 provides Local Language Experience Pack (LXPS) installation files, but Windows 11 no longer provides them. If you want to get them:

5.6.1. Download using the Windows Local Language Experience Packs (LXPs) Downloader

learn: https://github.com/ilikeyi/LXPs

 $\label{lem:loss_loss} \begin{tabular}{ll} After downloading, save to: $D:\OS_11\_Custom\Install\Insta$ 

File format: LanguageExperiencePack.zh-CN.Neutral.Appx

## 5.6.2. Manual download

Download Region: zh-CN, application ID: 9NRMNT6GMZ70, Store link: https://www.microsoft.com/store/productId/9NRMNT6GMZ70

## 5.6.2.2. Open the website: https://store.rg-adguard.net

5.6.2.2.1. a). Select a URL (link). b). Select a channel (RP). c). Enter keywords: https://www.microsoft.com/store/productId/9NRMNT6GMZ70

5.6.2.2.2. Search 26100 content in the web page, search results:

Microsoft.LanguageExperiencePackzh-CN\_26100.\*. neutral\_\_8wekyb3d8bbwe.appx

5.6.2.2.3. After downloading, save it to the

D:\OS\_11\_Custom\Install\Install\Inbox.apps directory and rename it: LanguageExperiencePack.zh-cn.Neutral.Appx

## 5.6.3. Execute the installation command to install the local language experience package (LXPs)

After understanding how to add zone tags, obtain LanguageExperiencePack.zh-cn.Neutral.appx, execute the installation command:

Add-AppxProvisionedPackage -Path "D:\OS\_11\_Custom\Install\Install\Mount" -PackagePath "D:\OS\_11\_Custom\Install

#### 5.6.4. Regional tag: New changes

The installed language of the offline image will become the default. For example, if the installed languages are en-US and zh-CN, when you reinstall or update the InBox Apps application, the installed language will be referenced for matching and the corresponding language pack will be automatically added. You can view the changes in the following ways.

#### 5.6.4.1. InBox Apps: An installed application package

\$custom\_array = @(); Get-AppXProvisionedPackage -Path "D:\OS\_11\_Custom\Install\Install\Mount" |
ForEach-Object { \$custom\_array += [PSCustomObject]@{ DisplayName = \$\_.DisplayName;
PackageName = \$\_.PackageName; Version = \$\_.Version; Architecture = \$\_.Architecture; ResourceId =
\$\_.ResourceId; Regions = \$\_.Regions; } };

o After executing the above PS code first, you can select the following "View" or "Export to CSV".

#### 5.6.4.1.1. View

\$custom\_array | Out-GridView

#### 5.6.4.1.2. Export to Csv

\$SaveTo = "D:\OS\_10\_Custom\Install\Install\Report.InBox.Apps.\$(Get-Date -Format "yyyyMMddHHmmss").csv"

\$custom\_array | Export-CSV -NoType -Path \$SaveTo

Write-host \$SaveTo -ForegroundColor Green

## 5.6.4.2. View available language settings

Dism /Image:"D:\OS\_10\_Custom\Install\Install\Mount" /Get-Intl

## 5.7. InBox Apps: Install

5.7.1. Mount or decompress the InBox Apps installation file

 $\textbf{Mount 26100.1742.240904-1906.ge\_release\_svc\_prod1\_amd64 fre\_InboxApps. iso\ \textbf{or\ extract\ to\ any\ location;}$ 

- 5.7.2. After executing the installation command, install InBox Apps to: Install.wim
  - Auto = Automatically search all local disks, default;
  - Custom path, e.g. specify F drive: \$ISO = "F:\packages"
  - Architecture: x64
  - Install.Inst.Inbox.apps.ps1
    - $o \\ \verb|\Expand{Install.Inst.Inbox.apps.ps1| }$
    - https://github.com/ilikeyi/solutions/blob/main/\_Learn/Packaging.tutorial/OS.11/24H2/Expand/Install/Instal
       l.Inst.InBox.Apps.ps1
  - Copy the code

```
$ISO = "Auto"
$Mount = "D:\OS_11_Custom\Install\Install\Mount"
$Arch = "x64"
try {
  Write-host "`n Offline image version: " -NoNewline
  $Current_Edition_Version = (Get-WindowsEdition -Path $Mount).Edition
  Write-Host $Current_Edition_Version -ForegroundColor Green
} catch {
  Write-Host "Error" -ForegroundColor Red
  Write-Host " $($_)" -ForegroundColor Yellow
  return

ErrorAction SilentlyContinue | Out-Null

Write-host "Finish" -ForegroundColor Green
} catch {
```

```
}
```

#### 5.9. InBox Apps: optimization

After the app is installed, provisioning the Appx package should be optimized to reduce the app's disk usage by replacing identical files with hard links, only for offline images.

#### 6. Cumulative updates

- When upgrading different versions or older versions to the latest version, you need to add the "checkpoint update" first before adding the latest cumulative update;
- After adding the language pack, you can install the same cumulative update as the initial version to solve the known issue that the "Component: All packages installed in the image" status is not refreshed after installation;
- To stay up to date, it is recommended that you download the latest version.

#### 6.1. Initial version

• Before you add the latest cumulative update, you need to add the "initial version" cumulative update first, otherwise the latest cumulative update cannot be added. Go to the download page:

 $OS\_11\_Custom \\ Install \\ Update, or download through direct connection, select download according to the architecture:$ 

## 6.1.1. x64, default

Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/d8b7f92b-bd35-4b4c-96e5-46ce984b31e0/public/windows11.0-kb5043080-x64\_953449672073f8fb99badb4cc6d5d7849b9c83e8.msu

Add to

 $$KBPath = "D:\OS_11\_Custom\Install\Update\windows11.0-kb5043080-x64\_953449672073f8fb99badb4cc6d5d7849b9c83e8.msu"$ 

Add-WindowsPackage -Path "D:\OS\_11\_Custom\Install\Install\Mount" -PackagePath \$KBPath

## 6.1.2. Arm64

Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/f263aa64-f367-42f0-9cad-328f342b93f7/public/windows11.0-kb5043080-arm64\_df540a05f9b118e339c5520f4090bb5d450f090b.msu

Add to

 $$KBPath = "D:\OS_11\_Custom\Install\Update\windows11.0-kb5043080-arm64\_df540a05f9b118e339c5520f4090bb5d450f090b.msu"$ 

 $Add-Windows Package - Path "D: \OS\_11\_Custom \Install \Mount" - Package Path $KBPath \Add-Windows \Add-Wind$ 

#### 6.2. Other versions

- Before installing the latest cumulative update, you need to add KB5043080 first, and then add other versions in sequence.
- Check "Windows 11 version information", for example, download cumulative update: KB5044284, Version: 26100.2033, go to the download page: https://www.catalog.update.microsoft.com/Search.aspx?q=KB5044284, download and save to: D:\OS\_11\_Custom \Install\Install\Update, or download through direct connection, select download according to the architecture:

#### 6.2.1. x64, default

Write-Host "Finish" -ForegroundColor Green

}else {

Write-host "Failed" -ForegroundColor Red
```

## 15. Split, merge, compress, and convert

Solid compression is in ESD file format. If the file exceeds 4GB, it cannot be split and cannot be copied to a FAT32 disk. This is a disadvantage.

Using FAT32 format to store Windows installation boot is the best solution. If the Install.wim file exceeds 4GB and cannot be copied to a FAT32 disk, you need to split the Install.wim file and copy it to a FAT32 disk after the file size is less than 4GB.

It is particularly important to learn how to split and merge, solid compression and conversion.

## 15.1. Splitting and merging

## 15.1.1. Splitting

After splitting Install.wim into 4GB file sizes and getting new file names Install.\*.swm, delete the old Install.wim.

- Install.Split.ps1
  - o \Expand\Install\Install.Split.ps1
  - o https://github.com/ilikeyi/solutions/blob/main/\_Learn/Packaging.tutorial/OS.11/24H2/Expand/Install/Install. Split.ps1

#### • Copy the code

```
Write-host "Split Install.wim into Install.*.swm";

Write-host "Splitting" -NoNewline;

Split-WindowsImage -ImagePath "D:\OS_11\sources\install.wim" -SplitImagePath "D:\OS_11\sources\install.swm" -FileSize "4096" -CheckIntegrity -ErrorAction SilentlyContinue | Out-Null

Write-Host "Split Complete`n" -ForegroundColor Green

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_11\sources\install.swm" -PathType leaf) {

Remove-Item -Path "D:\OS_11\sources\install.wim"

Write-Host "Done" -ForegroundColor Green

} else {

Write-Host "Failed" -ForegroundColor Red
```

### 15.1.2. Merge

After merging all Install.\*.swm into Install.wim, delete the old Install.\*.swm.

- Install.Merging.ps1
  - o \Expand\Install\Install.Merging.ps1
  - https://github.com/ilikeyi/solutions/blob/main/\_Learn/Packaging.tutorial/OS.11/24H2/Expand/Install/Install.
     Merging.ps1

## • Copy the code

```
Write-host "Merge all Install.*.swm files into Install.wim";

Get-WindowsImage -ImagePath "D:\OS_11\Sources\install.swm" -ErrorAction SilentlyContinue | ForEach-Object {

Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;

Write-Host "Index Number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow;

Write-Host "Exporting".PadRight(28) -NoNewline

dism /export-image /SourceImageFile: "D:\OS_11\Sources\install.swm"

/swmfile: "D:\OS_11\sources\install.*.swm" /SourceIndex: "$($_.ImageIndex)"

/DestinationImageFile: "D:\OS_11\Sources\install.wim" /Compress: "Max" /CheckIntegrity

Write-Host "Export Complete`n" -ForegroundColor Green

}

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_11\Sources\install.wim" -PathType leaf) {

Get-ChildItem -Path "D:\OS_11\sources" -Recurse -include "*.swm" | ForEach-Object {

Write-Host "Delete: $($_.Fullname)" -ForegroundColor Green
```

```
Remove-Item -Path $_.Fullname

}

Write-Host "Done" -ForegroundColor Green

}else {

Write-Host "Falied" -ForegroundColor Green
```

#### 15.2. Solid compressed ESD format and WIM format conversion

#### 15.2.1. Solid compression

After solid compression, you can edit version information and application files, etc.; you cannot mount images, etc. After obtaining the new file install.esd, delete the old Install.wim.

- Install.Compress.ps1
  - \Expand\Install\Install.Compress.ps1
  - https://github.com/ilikeyi/solutions/blob/main/\_Learn/Packaging.tutorial/OS.11/24H2/Expand/Install/Install.
     Compress.ps1

#### Copy the code

```
Write-host "Solid compressed Install.wim";

Get-WindowsImage -ImagePath "D:\OS_11\Sources\install.wim" -ErrorAction SilentlyContinue | ForEach-Object {

Write-Host "Image Name: "-NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;

Write-Host "Index Number: "-NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow;

Write-Host "Compressing".PadRight(28) -NoNewline

dism /export-image /SourceImageFile: "D:\OS_11\Sources\install.wim" /SourceIndex: "$($_.ImageIndex)" /DestinationImageFile: "D:\OS_11\Sources\install.esd" /Compress:recovery /CheckIntegrity

Write-Host "Compression completed `n" -ForegroundColor Green

}

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_11\Sources\install.esd" -PathType leaf) {

Remove-Item -Path "D:\OS_11\Sources\install.wim"

Write-Host "Done" -ForegroundColor Green

} else {

Write-Host "Falied" -ForegroundColor Green
```

## 15.2.2. Convert compressed files to WIM file format

Install.Convert.ps1

- \Expand\Install\Install.Convert.ps1
- https://github.com/ilikeyi/solutions/blob/main/\_Learn/Packaging.tutorial/OS.11/24H2/Expand/Install/Install.
   Convert.ps1

#### Copy the code

```
Write-host "Convert ESD to WIM";
Get-WindowsImage - ImagePath "D:\OS_11\Sources\install.esd" - ErrorAction SilentlyContinue | ForEach-Object {
    Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;
    Write-Host "Index Number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow;
    Write-Host "Exporting".PadRight(28) -NoNewline
    try {
          \label{lem:condition} Export-Windows Image - Source Image Path "D: \OS\_11 \setminus Sources \setminus Image Index - Source Image - Source Image - Source - Source
DestinationImagePath "D:\OS_11\Sources\install.wim" - CompressionType "Max" - CheckIntegrity - ErrorAction
SilentlyContinue | Out-Null
          Write-Host "Done`n" -ForegroundColor Green
     } catch {
          Write-Host $_-ForegroundColor Yellow
          Write-host "Falied`n" -ForegroundColor Red
Write-host "`nVerify completion and delete old files"
if (Test-Path -Path "D:\OS_11\Sources\install.wim" -PathType leaf) {
    Remove-Item -Path "D:\OS_11\Sources\install.esd"
    Write-Host "Done" -ForegroundColor Green
} else {
    Write-Host "Falied" -ForegroundColor Green
```

## III Custom encapsulation boot.wim

1. View Boot.wim details

Image name, image description, image size, architecture, version, index number, etc.

```
$ViewFile = "D:\OS_11\Sources\Boot.wim"

Get-WindowsImage -ImagePath $ViewFile | Foreach-Object { Get-WindowsImage -ImagePath $ViewFile -index $_.ImageIndex }
```

## 2. Specify the path to mount Boot.wim

New-Item -Path "D:\OS\_11\_Custom\Boot\Boot\Mount" -ItemType directory

#### 3. Start mounting Boot.wim

#### Default index number: 2

Mount-WindowsImage -ImagePath "D:\OS\_11\sources\boot.wim" -Index "2" -Path "D:\OS\_11\_Custom\Boot\Boot\Mount"

#### 4. Language pack: Boot

- Automatically install language packs: Get "Component: All installed packages in the image" and match them. After matching the corresponding names, install the local corresponding language pack files.
- When adding languages, different schema versions must be corresponded, and if not, errors are reported during the addition process.

#### 4.1. Language pack: Add

- Boot.Instl.lang.ps1
  - o \Expand\Boot\Boot.Instl.lang.ps1
  - o https://github.com/ilikeyi/solutions/blob/main/\_Learn/Packaging.tutorial/OS.11/24H2/Expand/Boot/Boot.Instl.lang.ps1

#### Copy the code

```
$Mount = "D:\OS_11_Custom\Boot\Boot\Mount"
$Sources = "D:\OS_11_Custom\Boot\Boot\Language\Add\zh-CN"
$Initl_install_Language_Component = @()
Get-WindowsPackage -Path $Mount | ForEach-Object {
  $Initl_install_Language_Component += $_.PackageName
Add-WindowsPackage -Path $Mount -PackagePath "$($Sources)\WinPE-FontSupport-zh-CN.cab"
$Language = @(

```

## 4.2. Offline image language: change

4.2.1. Change default language, regional settings, and other international settings

Region: zh-CN

 $\label{limit} Dism/Image: "D:\OS\_11\_Custom\Boot\Boot\Mount" / Set-AllIntl: "zh-CN" \\$ 

4.2.2. View available language settings

Dism /Image:"D:\OS\_11\_Custom\Boot\Boot\Mount" /Get-Intl

4.3. Components: All packages installed in the image

4.3.1. View

 ${\tt Get-WindowsPackage -Path "D:\OS\_11\_Custom\Boot\Boot\Mount" \mid Out-GridView}$ 

#### 4.3.2. Export to csv

\$SaveTo = "D:\OS\_11\_Custom\Boot\Boot\Report.Components.\$(Get-Date -Format "yyyyMMddHHmmss").csv"

Get-WindowsPackage -Path "D:\OS\_11\_Custom\Boot\Boot\Mount" | Export-CSV -NoType -Path \$SaveTo

Write-host \$SaveTo -ForegroundColor Green

#### 4.4. Language packs: sync to ISO installer

 $Copy-Item\ -Path\ "D:\ OS\_11\_Custom\ Boot\ Boot\ Mount\ sources\ Lh-CN"\ -Destination\ "D:\ OS\_11\ sources\ Lh-CN"\ -Recurse\ -Force$ 

#### 4.5. Regenerate Lang.ini

After regeneration, you can adjust the "Installation Interface", the order when selecting "Language", open lang.ini, the default preferred value = 3, non-default value = 2.

#### 4.5.1. Regenerate the mounted directory lang.ini

Regenerated Lang.ini file location: D:\OS\_11\_Custom\Boot\Boot\Mount\Sources\lang.ini

## 4.5.2. After regenerating lang.ini, sync to the installer

Regenerated Lang.ini file location: D:\OS\_11\Sources\lang.ini

Dism /image:"D:\OS\_11\_Custom\Boot\Boot\Mount" /gen-langini /distribution:"D:\OS\_11"

## 5. Cumulative updates

To prepare the cumulative updates file available, change the example file name: KB\_Boot.cab

## 5.1. Add

\$KBPath = "D:\OS\_11\_Custom\Boot\Boot\Update\KB\_Boot.cab"

 $Add-Windows Package - Path "D: \OS\_11\_Custom \setminus Boot \setminus Mount" - Package Path $KBPath Add-Windows Package - Path $KBPath Add-Windows - Package - Path $KBPath - Package - Path $KBPath Add-Windows - Package - Path $KBPath Add-Windows - Package - Path $KBPath - Package -$ 

## 5.2. Delete

\$KBPath = "D:\OS\_11\_Custom\Boot\Boot\Update\KB\_Boot.cab"

 $Remove-Windows Package - Path "D: \OS\_11\_Custom \Boot \Boot \Mount" - Package Path $KBPath \Boot \Bo$ 

## 5.3. Solid update

It cannot be uninstalled after curing, which cleans the recovery image and resets the basis of any superseded components.

Dism /image:"D:\OS\_11\_Custom\Boot\Boot\Mount" /cleanup-image /StartComponentCleanup /ResetBase

## 5.3.1. Clean components after curing and updating

 $Mount = D:OS_11_Custom\Boot\Boot\Mount$ 

```
Get-WindowsPackage -Path $Mount -ErrorAction SilentlyContinue | ForEach-Object {

if ($_.PackageState -eq "Superseded") {

Write-Host " $($_.PackageName)" -ForegroundColor Green

Remove-WindowsPackage -Path $Mount -PackageName $_.PackageName | Out-Null
}
```

## 6. Drive

#### 7. Other

#### 7.1. Bypass TPM check during installation

#### • Boot.Bypass.TPM.ps1

- o \Expand\Boot\Boot.Bypass.TPM.ps1
- o https://github.com/ilikeyi/solutions/blob/main/\_Learn/Packaging.tutorial/OS.11/24H2/Expand/Boot/Boot.Bypass.TPM.ps 1

#### Copy the code

```
$RegSystem = "D:\OS_11_Custom\Boot\Boot\Mount\Windows\System32\Config\SYSTEM"
$RandomGuid = [guid]::NewGuid()
Write-Host " HKLM:\$($RandomGuid)"
```

Start-Process reg -ArgumentList "Load ""HKLM\\$(\$RandomGuid)"" ""\$(\$RegSystem)""" -Wait -WindowStyle Hidden -ErrorAction SilentlyContinue

New-PSDrive -PSProvider Registry -Name OtherTasksTPM -Root HKLM -ErrorAction SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\\$(\$RandomGuid)\Setup\LabConfig" -Name "BypassCPUCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\\$(\$RandomGuid)\Setup\LabConfig" -Name "BypassStorageCheck" -Value 1 - PropertyType DWord -Force -ea SilentlyContinue | Out-Null

 $New-Item Property-Literal Path "HKLM: \s (\$Random Guid) \s tup \ Lab Config"-Name "Bypass RAM Check"-Value 1-Property Type DWord-Force-ea Silently Continue | Out-Null Continue | Out-Nu$ 

New-ItemProperty -LiteralPath "HKLM:\\$(\$RandomGuid)\Setup\LabConfig" -Name "BypassTPMCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

[gc]::collect()

 $Start-Process\ reg\ -Argument List\ "unload\ ""HKLM\s(\$RandomGuid)"""\ -Wait\ -WindowStyle\ Hidden\ -ErrorAction\ Silently Continue$ 

Remove-PSDrive -Name OtherTasksTPM

## 8. Save image: Boot.wim

#### 9. Unmount image: Boot.wim

Close any applications that may be accessing files in the image, including File Explorer.

Dismount-WindowsImage -Path "D:\OS\_11\_Custom\Boot\Boot\Mount" -Discard

#### IV Deployment engine

- Learn about "Automatically Adding Languages Installed in Windows Systems", learn: https://github.com/ilikeyi/Multilingual, how to download:
  - After entering the website, click "Code", "Download Compressed Package", and after the download is completed, you will get the main.zip compressed package file.
  - Go to the https://github.com/ilikeyi/Multilingual/releases download page, select the available version: 1.1.1.1, select the download source code format: zip, and get the Multilingual-1.1.1.1.zip compressed package file after the download is completed;
- Unzip the downloaded main.zip or Multilingual-1.1.1.1.zip to: D:\Multilingual-1.1.1.1, and rename: D:\Multilingual
- Learn "Unattended Windows Setup Reference", Intervene in the installation process by leaving it unattended.

#### Add method

#### 1.1. Add to ISO installation media

#### 1.1.1. Unattended

#### 1.1.1.1. Add to: [ISO]:\Autounattend.xml

Autounattend.xml interferes with the WinPE installer when booting an ISO installation.

 $\textbf{Copy D:} \\ \textbf{Multilingual} \\ \textbf{Learn} \\ \textbf{Unattend}. \\ \textbf{xml to D:} \\ \textbf{OS\_11} \\ \textbf{Autounattend}. \\ \textbf{xml to D:} \\ \textbf{OS\_11} \\ \textbf{OS\_11}$ 

Copy-Item "D:\Multilingual\\_Learn\Unattend\Mul.Unattend.xml" -Destination "D:\OS\_11\Autounattend.xml" -Force

## 1.1.1.2. Add to: [ISO]:\Sources\Unattend.xml

When mounting or unpacking an ISO, after running the [ISO]:\Setup.exe installer, [ISO]:\Sources\Unattend.xml will intervene in the installation process.

 $\textbf{Copy D:} \\ \textbf{Multilingual} \\ \textbf{Learn} \\ \textbf{Unattend.xml to D:} \\ \textbf{OS\_11} \\ \textbf{Sources} \\ \textbf{Unattend.xml to D:} \\ \textbf{OS\_11} \\ \textbf{Sources} \\ \textbf{Unattend.xml to D:} \\ \textbf{OS\_11} \\ \textbf$ 

Copy-Item "D:\Multilingual\\_Learn\Unattend\Mul.Unattend.xml" -Destination "D:\OS\_11\Sources\Unattend.xml" -Force

## $\textbf{1.1.1.3.} \qquad \textbf{Add to: [ISO]:} \\ \textbf{SOEM} \\ \textbf{SPanther} \\ \textbf{Isom} \\ \textbf{SOEM} \\ \textbf{SOEM$

Copy it to the system disk during the installation process, copy to: {system disk}:\Windows\Panther\unattend.xml

## 1.1.1.3.1. Create \$OEM\$ path

New-Item -Path "D:\OS\_11\sources\` \$OEM\$\` \$\$\Panther" -ItemType Directory

#### 1.1.1.3.2. Copy

Copy D:\Multilingual\\_Learn\Unattend\Mul.Unattend.xml to D:\OS\_11\Sources\\$OEM\$\Panther\Unattend.xml

Copy-Item "D:\Multilingual\\_Learn\Unattend\Mul.Unattend.xml" -Destination "D:\OS\_11\sources\`\$OEM\$\`\$\$\Panther\Unattend.xml" -Force

#### 1.1.2. Deployment engine: add

Add "Automatically add installed languages for Windows systems" to D:\OS\_11\sources\\$OEM\$\\$1\Yi\Engine in the directory.

#### 1.1.2.1. Deployment Engine: Copy

Copy D:\Multilingual\Engine to D:\OS\_11\Sources\\$OEM\$\\$1\Yi\Engine

 $\label{lem:copy-lem$ 

#### 1.1.2.2. Deployment engine: custom deployment tags

```
$Flag = @(
 "Is_Mark_Sync" # Allow global search and synchronization of deployment tags
 # Prerequisite deployment
# "Auto_Update" # Allow automatic updates
# "Use_UTF8" # Beta: Global language support using Unicode UTF-8
 "Disable_Network_Location_Wizard" # Network Location Wizard
 "Disable_Cleanup_Appx_Tasks" # Appx Cleanup and maintenance tasks
 "Disable_Cleanup_On_Demand_Language" # Prevent cleanup of unused on-demand feature language
packs
 "Disable_Cleanup_Unsed_Language" # Prevent cleaning of unused language packs
 "Prerequisites_Reboot" # Restart your computer
 # Complete first deployment
# "Popup_Engine" # Allow the deployment engine main interface to pop up for the first time
# "Allow_First_Pre_Experience" # Allow first preview, as planned
 "Reset_Execution_Policy" # Restore PowerShell execution policy: Restricted
 "Clear_Solutions" # Delete the entire solution
 "Clear_Engine" # Delete the deployment engine and keep the others
# "First_Experience_Reboot" # Restart your computer
ForEach ($item in $Flag) {
```

Write-host " \$(\$item)" -ForegroundColor Green

```
New-Item -Path "D:\OS_11\sources\` $OEM$\` $1\Yi\Engine\Deploy\Allow" -ItemType Directory -

ErrorAction SilentlyContinue | Out-Null

Out-File -FilePath "D:\OS_11\sources\` $OEM$\` $1\Yi\Engine\Deploy\Allow\$($item)" -Encoding utf8 -

ErrorAction SilentlyContinue

}
```

## 1.2. Add to mounted

Through "Custom encapsulation Install.wim", execute "Start mounting Install.wim" and mount to:

D:\OS\_11\_Custom\Install\Install\Mount

#### 1.2.1. Unattended

Copy D:\Multilingual\\_Learn\Unattend\Mul.Unattend.xml to
D:\OS\_11\_Custom\Install\Install\Mount\Panther\Unattend.xml

 $\label{lem:copy-ltem} $$\operatorname{D:Multilingual}_Learn\Unattend\Mul.Unattend.xml" -Destination $$\mathbb{D}:\OS_11_Custom\Install\Mount\Panther" -Force $$$ 

#### 1.2.2. Deployment engine: add

Add "Automatically add languages installed on Windows systems" to the D:\OS\_11\_Custom\Install\Install\Mount\Yi\Engine directory.

## 1.2.2.1. Deployment Engine: Copy

 $\textbf{Copy D:} \\ \textbf{Multilingual} \\ \textbf{Engine to D:} \\ \textbf{OS\_11\_Custom} \\ \textbf{Install} \\ \textbf{Mount} \\ \textbf{Yi} \\ \textbf{Engine to D:} \\ \textbf{OS\_11\_Custom} \\ \textbf{Install} \\ \textbf{Mount} \\ \textbf{Yi} \\ \textbf{Engine to D:} \\ \textbf{OS\_11\_Custom} \\ \textbf{Install} \\ \textbf{Mount} \\ \textbf{Yi} \\ \textbf{Engine to D:} \\ \textbf{OS\_11\_Custom} \\ \textbf{Install} \\ \textbf{Mount} \\ \textbf{Yi} \\ \textbf{Engine to D:} \\ \textbf{OS\_11\_Custom} \\ \textbf{OS\_110\_Custom} \\ \textbf{OS\_110\_Custom}$ 

 $\label{lem:copy-lem$ 

## 1.2.2.2. Deployment engine: custom deployment tags

\$Flag = @(

"Is\_Mark\_Sync" # Allow global search and synchronization of deployment tags

# Prerequisite deployment

# "Auto\_Update" # Allow automatic updates

# "Use\_UTF8" # Beta: Global language support using Unicode UTF-8

"Disable\_Network\_Location\_Wizard" # Network Location Wizard

"Disable\_Cleanup\_Appx\_Tasks" # Appx Cleanup and maintenance tasks

"Disable\_Cleanup\_On\_Demand\_Language" # Prevent cleanup of unused on-demand feature language packs

"Disable\_Cleanup\_Unsed\_Language" # Prevent cleaning of unused language packs

"Prerequisites\_Reboot" # Restart your computer

# Complete first deployment

# "Popup\_Engine" # Allow the deployment engine main interface to pop up for the first time

```
# "Allow_First_Pre_Experience" # Allow first preview, as planned
"Reset_Execution_Policy" # Restore PowerShell execution policy: Restricted
"Clear_Solutions" # Delete the entire solution

"Clear_Engine" # Delete the deployment engine and keep the others

# "First_Experience_Reboot" # Restart your computer
)

ForEach ($item in $Flag) {

Write-host " $($item)" -ForegroundColor Green

New-Item -Path "D:\OS_11\sources\`$OEM$\`$1\Yi\Engine\Deploy\Allow" -ItemType Directory -

ErrorAction SilentlyContinue | Out-Null

Out-File -FilePath "D:\OS_11\sources\`$OEM$\`$1\Yi\Engine\Deploy\Allow\$($item)" -Encoding utf8 -

ErrorAction SilentlyContinue
```

#### 2. Deployment Engine: Advanced

#### 2.1. Deployment engine: adding process

After copying the deployment engine, you can add deployment tags to intervene in the installation process.

## 2.2. Unattended solution

When the customization is unattended, please modify it simultaneously if the following files exist:

- D:\OS\_11\Autounattend.xml
- D:\OS\_11\Sources\Unattend.xml
- D:\OS\_11\sources\\$OEM\$\\$\$\Panther\unattend.xml
- D:\OS\_11\_Custom\Install\Install\Mount\Panther\Unattend.xml

## 2.2.1. Multilingual or monolingual

In multi-language and monolingual, you can switch between each other. When replacing, please replace all the same ones in the file.

## 2.2.1.1. Multi-language

```
<UILanguage>%OSDUILanguage%</UILanguage>
<InputLocale>%OSDInputLocale%</InputLocale>
<SystemLocale>%OSDSystemLocale%</SystemLocale>
<UILanguage>%OSDUILanguage%</UILanguage>
<UILanguageFallback>%OSDUILanguageFallback%</UILanguageFallback>
<UserLocale>%OSDUserLocale%</UserLocale>
```

#### 2.2.1.2. Monolingual

A single language needs to specify a Region tag, for example, specify a Region tag:  ${\sf zh\text{-}CN}$ 

```
<UILanguage>zh-CN</UILanguage>
<InputLocale>zh-CN</InputLocale>
<SystemLocale>zh-CN</SystemLocale>
<UILanguage>zh-CN</UILanguage>
<UILanguageFallback>zh-CN</UILanguageFallback>
```

# 2.2.2. User plan

By default, the self-created user Administrator is used and logged in automatically. It can be switched by modifying the following configuration: self-created or customized user.

## 2.2.2.1. Self-created user Administrator

<Enabled>true</Enabled>

<UserLocale>zh-CN</UserLocale>

By default, the self-created user: Administrator is used and logged in automatically, inserted between <OOBE> and </OOBE>.

```
and </OOBE>.
<UserAccounts>
 <LocalAccounts>
   <LocalAccount wcm:action="add">
     <Password>
      <Value></Value>
      <PlainText>true</PlainText>
     </Password>
     <Description>Administrator</Description>
     <DisplayName>Administrator</DisplayName>
     <Group>Administrators</Group>
     <Name>Administrator</Name>
   </LocalAccount>
 </LocalAccounts>
</UserAccounts>
<AutoLogon>
 <Password>
   <Value></Value>
   <PlainText>true</PlainText>
 </Password>
```

</AutoLogon>

#### 2.2.2.2. Custom user

After setting up a custom user and installing the system, in OOBE, you can choose settings such as local and online users.

#### 2.2.2.2.1. Delete

Username: Removed from start <UserAccounts> to </UserAccounts>

Autologin: Remove from start < AutoLogon > to </ AutoLogon >

## 2.2.2.2. Replace

From the beginning <OOBE> to </OOBE>

<OOBE>

<ProtectYourPC>3</ProtectYourPC>

<HideEULAPage>true</HideEULAPage>

<HideWirelessSetupInOOBE>true</HideWirelessSetupInOOBE>

</OOBE>

## D. ISO

## II Generate ISO

1. Download OScdimg

Select the Oscdimg version according to the architecture, and save it to: D:\ after downloading. To save in other paths, please enter the absolute path of OScdimg.exe;

1.1. x64

https://github.com/ilikeyi/Solutions/raw/refs/heads/main/\_Encapsulation/Modules/AIO/Oscdimg/amd64/oscdimg.exe

1.2. x86

 $https://github.com/ilikeyi/Solutions/raw/refs/heads/main/\_Encapsulation/Modules/AIO/Oscdimg/x86/oscdimg.exe$ 

1.3. arm64

https://github.com/ilikeyi/Solutions/raw/refs/heads/main/\_Encapsulation/Modules/AIO/Oscdimg/arm64/oscdimg.exe

- 2. Use the oscdimg command line to generate an ISO file and save it to: D:\OS\_11.iso
  - ISO.ps1
    - o \Expand\ISO.ps1

o https://github.com/ilikeyi/solutions/blob/main/\_Learn/Packaging.tutorial/OS.11/24H2/Expand/ISO.ps1

#### Copy the code

```
$Oscdimg = "D:\Oscdimg.exe"

$ISO = "D:\OS_11"

$Volume = "OS_11"

$SaveTo = "D:\OS_11.iso"

$Arguments = @("-m", "-o", "-u2", "-udfver102", "-l""$($Volume)""", "-bootdata:2#p0,e,b""$($ISO)\boot\eff\microsoft\boot\eff\sys.bin""", $ISO, $SaveTo)

Start-Process -FilePath $Oscdimg -ArgumentList $Arguments -wait -nonewwindow
```

## III Bypass TPM installation check

- 1. Learn about: https://github.com/AveYo/MediaCreationTool.bat/tree/main/bypass11 and download: Quick\_11\_iso\_esd\_wim\_TPM\_toggle.bat
- 2. Drag the D:\OS\_11.iso file to Quick\_11\_iso\_esd\_wim\_TPM\_toggle.bat, and "add" or "delete" the TPM installation check function in reverse order.

#### Chapter 2 Common problem

II Clean all mounts to

Close any applications that may be accessing files in the image, including File Explorer.

 ${\tt Dismount-WindowsImage - Path "D: \Cs_11\_Custom \Install \Mount" - Discard}$ 

Dismount-WindowsImage -Path "D:\OS\_11\_Custom\Install\WinRE\Mount" -Discard

Dismount-WindowsImage -Path "D:\OS\_11\_Custom\Boot\Boot\Mount" -Discard

## III Fix the problem of abnormal mounting

1. View mounted

Get-WindowsImage -Mounted

2. Delete the DISM mount record saved in the registry

 $Remove-Item\ -Path\ "HKLM: \ SOFTWARE \ Microsoft \ WIMMount \ Mounted\ Images \ "-Force\ -Recurse\ -Error Action\ Silently Continue \ Mounted\ M$ 

3. Delete all resources associated with the corrupted mounted image

Clear-WindowsCorruptMountPoint

Dism /cleanup-wim

## IV Clean up

A large number of temporary files will be generated during the packaging process. Installation files will be temporarily released when installing InBox Apps applications, installing cumulative updates, and installing language packs. Therefore, unscheduled cleaning of outdated ones will occupy a large amount of

disk space for a long time. It is recommended that you try the following methods to achieve this. Cleanup plan to free up more space:

#### 1. Common logs

## 1.1. Clean using the command line

```
$TempPaths = @( $env:Temp; "$($env:SystemRoot)\Logs\DISM"; )

foreach ($TempPath in $TempPaths) {

   if (Test-Path -Path $TempPath) {

       write-host " $($TempPath)" -ForegroundColor Green

        Get-ChildItem -Path $TempPath -Recurse -Force | ForEach-Object {

            try {

                Remove-Item $_.FullName -Force -Recurse -ErrorAction SilentlyContinue | Out-Null
            } catch {

                write-host $__-ForegroundColor Red

            }

        }
}
```

## 1.2. Manual deletion

## 1.2.1. DISM log

Using the "Disk Cleanup" function, the logs generated by DISM cannot be cleaned and need to be deleted manually. Path: {system disk}:\Windows\Logs\DISM

## 1.2.2. Temporary directory

Using the "Disk Cleanup" function, files in the temporary directory cannot be cleaned and manual operation is required.

Run: %Temp% to quickly locate and open the temporary directory. Path: {system disk}:\Users\{username}\AppData\Local\Temp

## 1.2.3. Clear the command line records of "Terminal"

 $Remove-Item\ - Path\ (Get-PSRead line Option). History Save Path\ - Error Action\ Silently Continue$ 

After cleaning up command line records, you need to restart the "Terminal" to take effect.

## 2. Disk cleanup

Run cleanmgr, selecting the disks and types to clean.

## Chapter 3 Known issues
