

MICROSOFT WINDOWS SERVER 2022

Different system versions have different packaging methods. The packaging process includes: "Language pack: add, associate, delete", "Drive: add, delete", "Cumulative update: add, delete" etc.

There are many hidden stories hidden behind this. If you want to unlock these, are you ready to start trying to encapsulate them?

Chapter 1 Encapsulation

A. Prerequisites

I. Running system

1. When using the DISM command to create a higher version image

When the operating system you are running is Windows 10 or lower than Windows 11 24H2, in some cases, using the DISM command to create a higher version image will cause some unknown problems. For example, when running the DISM command in the Windows 10 operating system to process the Windows Server 2025 offline image, you may receive an error message during the packaging process: "This application cannot run on your computer." Solution:

- 1.1. Upgrade the running operating system or reinstall to a higher version (recommended);
- 1.2. Upgrade or install a new version of ADK or PowerShell (not recommended)
 - 1.2.1. You can try to upgrade to the latest PowerShell 7 or higher version;
 - 1.2.2. After installing the latest version of ADK and replacing the DISM command, the problem of low DISM version can be solved. However, the command line mainly used by the packaging script is the PowerShell command line, so it is not recommended that you use the above method. The best method is to upgrade the running operating system or reinstall to a higher version.

2. Disk partition

- 2.1. After mounting an offline image to a REFS disk partition, some DISM commands may fail to execute properly. NTFS disk partitions are not affected by this.
- 2.2. After the ISO is decompressed, its location is not affected by the REFS partition.
- 3. N ways to speed up Windows operating system

When processing packaging tasks, installing cumulative updates, installing drivers, and installing applications in InBox Apps, a large number of temporary files will be generated. The following methods can be used to speed up the system:

- 3.1. Turn off Windows Security Center
 - Turning on Windows Security Center will scan files and take up a lot of CPU.
 - During the test: It took 1 hour and 22 minutes before it was turned off, and 20 minutes after it was turned off.

How to turn off:

Green is the command line, hold down the Windows key and press R to launch Run.

- 3.1.1. Open Windows Security Center or run: windowsdefender:
- 3.1.2. Select "Virus & threat protection" or run: windowsdefender://threat
- 3.1.3. Find "Virus and Threat Protection Settings", click "Manage Settings" or run: windowsdefender://threatsettings. It is recommended that you turn off some features:
 - 3.1.3.1. Real-time protection
 - 3.1.3.2. Cloud-provided protection
 - 3.1.3.3. Automatically submit samples
 - 3.1.3.4. Tamper Protection

3.1.4. When not in the package, it is recommended that you turn on Windows Security Center.

3.2. Turn off virtualization-based security

Even after closing Windows Security Center, virtualization-based security is still running, and the system running speed will be greatly reduced. The speed improvement is obvious after closing it.

3.2.1. After running, restart your computer

dism /Online /Disable-Feature:microsoft-hyper-v-all /NoRestart

dism /Online /Disable-Feature:IsolatedUserMode /NoRestart

dism /Online /Disable-Feature: Microsoft-Hyper-V-Hypervisor /NoRestart

dism /Online /Disable-Feature:Microsoft-Hyper-V-Online /NoRestart

dism /Online /Disable-Feature: Hypervisor Platform /No Restart

mountvol X: /s

cmd /c copy /y %WINDIR%\System32\SecConfig.efi X:\EFI\Microsoft\Boot\SecConfig.efi

 $bcdedit/create \{0cb3b571-2f2e-4343-a879-d86a476d7215\}/d \ "DebugTool"/application osloader \ (a) the control of the control$

 $bcdedit/set \{0cb3b571-2f2e-4343-a879-d86a476d7215\}\ path\ "\EFI\Microsoft\Boot\SecConfig.efi"$

bcdedit /set {bootmgr} bootsequence {0cb3b571-2f2e-4343-a879-d86a476d7215}

bcdedit /set {0cb3b571-2f2e-4343-a879-d86a476d7215} loadoptions DISABLE-LSA-ISO,DISABLE-VBS

bcdedit /set {0cb3b571-2f2e-4343-a879-d86a476d7215} device partition=X:

mountvol X: /d

bcdedit/set hypervisorlaunchtype off

3.2.2. View Status

Run Msinfo32 and check the "Virtualization-based Security" status in the system summary.

4. Command line

- 4.1. Optional "Terminal" or "PowerShell ISE", if "Terminal" is not installed, please go to: https://github.com/microsoft/terminal/releases

 After downloading;
- 4.2. Open "Terminal" or "PowerShell ISE" as administrator, it is recommended to set the PowerShell execution policy: bypass, PS command line:

 ${\sf Set-ExecutionPolicy} \hbox{-}{\sf ExecutionPolicy} \hbox{-}{\sf Bypass} \hbox{-}{\sf Force}$

- 4.3. In this article, PS command line, green part, please copy it, paste it into the "Terminal" dialog box, press Enter and start running;
- 4.4. When there is .ps1, right-click the file and select Run with PowerShell, or copy the path and paste it into Terminal to run, the path with a colon, add the & character in the command line, example: & "D:\YiSolutions_Encapsulation_SIP.ps1"

II Requirements

- 1. System installation package
 - 1.1. Prepare to download the initial release or developer version

- 1.1.1. x64
 - 1.1.1.1. Filename: en-us_windows_server_2022_x64_dvd_620d7eac.iso

List of files: https://files.rg-adguard.net/file/9a0f4eb7-c3a9-e46b-3fc8-cdb71289dbfb

1.2. For example, after downloading en-us_windows_server_2022_x64_dvd_620d7eac.iso, extract it to: D:\en-us_windows_server_2022_x64_dvd_620d7eac

Note: Before decompressing to disk D, you should check whether it is a ReFS partition. If it is a ReFS partition, some DISM commands will fail. Solution: Please use a disk partition in NTFS format.

- 1.3. After decompression, change the directory D:\en-us_windows_server_2022_x64_dvd_620d7eac to D:\OS_2022
- 1.4. All scripts and all paths have been set to D:\OS_2022 by default as the image source.
- 2. Language Pack
 - 2.1. Learn
 - 2.1.1. Add languages to a Windows 11 image
 - 2.1.2. Language and region Features on Demand (FOD)
 - 2.1.2.1. Fonts
 - When adding a language pack, when the corresponding region is triggered, the required font functions need to be added, download "List of all available language FODs" learn more.
 - In "Language package: extract", the automatic recognition function has been added, and you can understand the functions: Function Match_Required_Fonts
 - 2.1.2.2. Regional association

What are regional connections?

- When the image language is only in English, after adding the zh-HK language pack, the image language will not be added. You should install zh-TW first, and then install zh-HK to obtain the corresponding association.
- Please refer to Microsoft's official original version: Windows 10, Windows 11 Traditional Chinese version.

Known regional associations:

2.1.2.2.1. Region: zh-TW, Optional associated areas: zh-HK

- 2.2. Language pack: Download
 - 2.2.1. Filename: https://software-download.microsoft.com/download/sg/20348.1.210507-1500.fe_release_amd64fre_SERVER_LOF_PACKAGES_OEM.iso

List of files: https://files.rg-adguard.net/file/f4a036a7-5c8e-6bd6-764a-83655c1a9ce5

- B. Language package: extract
 - I. Language pack: Ready

- II. Language pack: Extract scheme
 - 1. Add
 - 1.1. Language name: Simplified Chinese China, language tag: zh-CN, Scope of application: Install.Wim, Boot.Wim, WinRE.Wim
 - 2. Delete
 - 2.1. Language name: English United States, language tag: en-US, Scope of application: Install.Wim, Boot.Wim, WinRE.Wim
- III. Execute the extract command
 - Auto = automatically search all local disks, default;
 - Customize the path, for example, specify the E drive: \$ISO = "E:\"

@{ Match = @("da-dk", "iu-Cans", "iu-Cans-CA"); Name = "Cans"; }

- Extract.ps1
 - o \Expand\Extract.ps1
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Extract.ps1
- Copy the code

```
$ISO = "Auto"
$SaveTo = "D:\OS_2022_Custom"
$Extract_language_Pack = @(
     @{ Tag = "zh-CN"; Act = "Add"; Scope = @( "Install\Install"; "Install\WinRE"; "Boot\Boot" ) }
     @{ Tag = "en-US"; Act = "Del"; Scope = @( "Install\Install"; "Install\WinRE"; "Boot\Boot" ) }

     break
```

3.1.4.2. Offline image language: change

3.1.4.2.1. Change default language, regional settings, and other international settings

Language Tag: zh-CN

Dism /Image:"D:\OS_2022_Custom\Install\WinRE\Mount" /Set-AllIntl:zh-CN

3.1.4.2.2. View available language settings

 $\label{lem:limit} Dism/Image: "D:\OS_2022_Custom\\Install\WinRE\Mount"/Get-Intl$

3.1.4.3. Components: All packages installed in the image

3.1.4.3.1. View

Get-WindowsPackage -Path "D:\OS_2022_Custom\Install\WinRE\Mount" | Out-GridView

3.1.4.3.2. Export to Csv

 $SaveTo = "D:\OS_2022_Custom\Install\WinRE\Report.Components.\$(Get-Date\-Format\"yyyyMMddHHmmss").csv"$

 $\label{lem:condition} Get-WindowsPackage - Path "D:\OS_2022_Custom\Install\WinRE\Mount" \mid Export-CSV-NoType - Path $SaveTo$

Write-host \$SaveTo -ForegroundColor Green

3.1.5. Cumulative updates

To prepare the cumulative updates file available, change the example file name: KB_WinRE.cab

3.1.5.1. Add

```
$KBPath = "D:\OS_2022_Custom\Install\WinRE\Update\KB_WinRE.cab"
```

Add-WindowsPackage -Path "D:\OS_2022_Custom\Install\WinRE\Mount" -PackagePath \$KBPath

3.1.5.2. Delete

```
$KBPath = "D:\OS_2022_Custom\Install\WinRE\Update\KB_WinRE.cab"
```

3.1.5.3. Solid update

It cannot be uninstalled after curing, which cleans the recovery image and resets the basis of any superseded components.

Dism /image:"D:\OS_2022_Custom\Install\WinRE\Mount" /cleanup-image /StartComponentCleanup /ResetBase

3.1.5.3.1. Clean components after curing and updating

```
$Mount = "D:\OS_2022_Custom\Install\WinRE\Mount"

Get-WindowsPackage -Path $Mount -ErrorAction SilentlyContinue | ForEach-Object {

if ($_..PackageState -eq "Superseded") {

Write-Host " $($_..PackageName)" -ForegroundColor Green

Remove-WindowsPackage -Path $Mount -PackageName $_.PackageName | Out-Null
}
```

3.1.6. Drive

3.1.7. Save image: WinRE.wim

3.1.8. Unmount image: WinRE.wim

Close any applications that may be accessing files in the image, including File Explorer.

Dismount-WindowsImage -Path "D:\OS_2022_Custom\Install\WinRE\Mount" -Discard

3.1.9. After rebuilding WinRE.wim, the file size can be reduced

- WinRE.Rebuild.ps1
 - o \Expand\Install\WinRE\WinRE.Rebuild.ps1
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Install/WinRE/WinR E.Rebuild.ps1

Copy the code

```
FileName = "D:\OS_2022\_Custom\Install\Mount\Windows\System32\Recovery\WinRE.wim"
Get-WindowsImage -ImagePath $Filename -ErrorAction SilentlyContinue | ForEach-Object {
 Write-Host " Image name: "-NoNewline; Write-Host "$($_.ImageName)" -ForegroundColor Yellow
 Write-Host " The index number: "-NoNewline; Write-Host "$($_.ImageIndex)" -ForegroundColor Yellow
 Write-Host "`n Under reconstruction ".PadRight(28) -NoNewline
 try {
   Export-WindowsImage -SourceImagePath "$($Filename)" -SourceIndex "$($_.ImageIndex)" -
DestinationImagePath "$($FileName).New" -CompressionType max | Out-Null
   Write-Host "Finish" -ForegroundColor Green
 } catch {
   Write-Host $_ -ForegroundColor Yellow
   Write-host $Failed -ForegroundColor Red
Write-Host "`n Rename: " -NoNewline -ForegroundColor Yellow
if (Test-Path "$($FileName).New" -PathType Leaf) {
 Remove-Item -Path $Filename
 Move-Item -Path "$($FileName).New" -Destination $Filename
 Write-Host "Finish" -ForegroundColor Green
} else {
 Write-host "Failed" -ForegroundColor Red
```

3.1.10. Backup WinRE.wim

- WinRE.Backup.ps1
 - o \Expand\Install\WinRE\WinRE.Backup.ps1

https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Install/WinRE/WinR
 E.Backup.ps1

Copy the code

```
$WimLibPath = "D:\OS_2022_Custom\Install\Install\Update\Winlib"

$FileName = "D:\OS_2022_Custom\Install\Install\Mount\Windows\System32\Recovery\WinRE.wim"

New-Item -Path $WimLibPath -ItemType Directory

Copy-Item -Path $FileName -Destination $WimLibPath -Force
```

3.1.11. Replace WinRE.wim within the Install.wim image

- After each installation of Install.wim, use item "Replace the WinRE.wim";
- Learning "Get all index numbers of Install.wim and replace the old WinRE.wim".

PROCESS FILES INSIDE THE INSTALL.WIM IMAGE, END

4. Language pack

- Automatically install language packs: Get "Component: All installed packages in the image" and match them. After matching the corresponding names, install the local corresponding language pack files.
- When adding languages, different schema versions must be corresponded, and if not, errors are reported during the addition process.

4.1. Language pack: add

```

4.2. Offline image language: change

- Starting Windows 11, the default System UI Language set by DISM is left unaltered on all editions except for Home edition. For all commercial editions the language chosen during the Out-of-Box Experience (OOBE) is set as the System Preferred UI language and Windows will be displayed in this language and for Home edition the language chosen at OOBE will continue to be the default System UI Language.
- As of Windows 10, version 2004, if an .appx-based Language Experience Pack (LXP) backed language is passed as an
 argument then the language will be set as the System Preferred UI language and its parent language will be set as the Default
 System UI language. In prior versions only .cab based language packs were supported.
- 4.2.1. Change default language, regional settings, and other international settings

Language Tag: zh-CN

4.2.2. View available language settings

4.3.2. Export to Csv

\$SaveTo = "D:\OS_2022_Custom\Install\Install\Report.Components.\$(Get-Date -Format "yyyyMMddHHmmss").csv"

Get-WindowsPackage -Path "D:\OS_2022_Custom\Install\Install\Mount" | Export-CSV -NoType -Path \$SaveTo

Write-host \$SaveTo -ForegroundColor Green

- 5. Cumulative updates
 - 5.1. Download

Check the "Windows Server 2022 Update History", for example, install the cumulative update: KB5030216

Go to the download page: https://www.catalog.update.microsoft.com/Search.aspx?q=Kb5030216 Or "Direct download" (If you cannot download, please go to the download page), save to

5.2. Add

 $$KBPath = "D:\OS_2022_Custom\Install\Update\windows10.0-kb5030216-x64_cbe587155f9818548b75f65d5cd41d341ed2fc61.msu"$

5.3. Solid update

It cannot be uninstalled after curing, which cleans the recovery image and resets the basis of any superseded components.

Dism /Image:"D:\OS_2022_Custom\Install\Mount" /cleanup-image /StartComponentCleanup /ResetBase

5.3.1. Clean up components after curing updates

- Install.Update.Curing.ps1
 - \Expand\Install\Install.Update.Curing.ps1
 - o https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Install/Install.Upd ate.Curing.ps1

Copy the code

```
$Mount = "D:\OS_2022_Custom\Install\Install\Mount"

Get-WindowsPackage -Path $Mount -ErrorAction SilentlyContinue | ForEach-Object {

if ($_.PackageState -eq "Superseded") {

Write-Host " $($_.PackageName)" -ForegroundColor Green

Remove-WindowsPackage -Path $Mount -PackageName $_.PackageName | Out-Null
}
```

- 6. Drive
- 7. Deployment engine: Add
 - Learn "Deployment engine", if added to ISO installation media, can skip adding to mounted.
 - After adding the deployment engine, continue at the current location.
- 8. Health

Check whether there is any damage before saving. When the health status is abnormal, abort saving

 $Repair-Windows Image - Path "D: \OS_2022_Custom \Install \Install \Mount" - Scan Health \Mount \Mo$

9. Replace the WinRE.wim

WinRE.wim in all index numbers in Install.wim has been replaced in batches. Please skip this step.

```
\label{lem:winre} $$ \ \ = \ "D:\OS_2022\_Custom\Install\Install\Update\Winlib\WinRE.wim" $$
```

\$CopyTo = "D:\OS_2022_Custom\Install\Install\Mount\Windows\System32\Recovery"

Copy-Item -Path \$WinRE -Destination \$CopyTo -Force

10. Save image: Install.wim

Save-WindowsImage -Path "D:\OS_2022_Custom\Install\Install\Mount"

11. Unmount image: Install.wim

Close any applications that may be accessing files in the image, including File Explorer.

Dismount-WindowsImage -Path "D:\OS_2022_Custom\Install\Install\Mount" -Discard

CYCLIC OPERATION AREA, END.

12. How to batch replace WinRE.wim in all index numbers in Install.wim

12.1. Get WimLib

After going to the official website of https://wimlib.net, select a different version: arm64, x64, x86, and extract it to: D:Wimlib after downloading.

12.2. How to extract and update WinRE.wim in Install.wim

12.2.1. Extract the WinRE.wim file from Install.wim

- Install.WinRE.Extract.ps1
 - \Expand\Install\Install.WinRE.Extract.ps1
 - o https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Install/Install.WinRE.Extract.ps1

• Copy the code

```
$Arguments = @(

"extract",

"D:\OS_2022\sources\install.wim", "1",

"\Windows\System32\Recovery\Winre.wim",

"--dest-dir=""D:\OS_2022_Custom\Install\Install\Update\Winlib"""

)

New-Item -Path "D:\OS_2022_Custom\Install\Install\Update\Winlib" -ItemType Directory

Start-Process -FilePath "d:\wimlib\wimlib-imagex.exe" -ArgumentList $Arguments -wait -nonewwindow
```

12.2.2. Get all index numbers of Install.wim and replace the old WinRE.wim

Install.WinRE.Replace.wim.ps1

- \Expand\Install\Install.WinRE.Replace.wim.ps1
- o https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Install/Install.WinRE.Replace.wim.ps1

• Copy the code

```
Get-Windowslmage -ImagePath "D:\OS_2022\sources\install.wim" -ErrorAction SilentlyContinue | ForEach-Object {

Move-Item -Path "$($InstallWim).New" -Destination $InstallWim

Write-Host "Finish" -ForegroundColor Green

} else {

Write-host "Failed" -ForegroundColor Red
```

14. Split, merge, compress, and convert

Solid compression is in ESD file format. If the file exceeds 4GB, it cannot be split and cannot be copied to a FAT32 disk. This is a disadvantage.

Using FAT32 format to store Windows installation boot is the best solution. If the Install.wim file exceeds 4GB and cannot be copied to a FAT32 disk, you need to split the Install.wim file and copy it to a FAT32 disk after the file size is less than 4GB.

It is particularly important to learn how to split and merge, solid compression and conversion.

14.1. Splitting and merging

14.1.1. Splitting

 $After splitting Install.wim\ into\ 4GB\ file\ sizes\ and\ getting\ new\ file\ names\ Install.*.swm,\ delete\ the\ old\ Install.wim.$

- Install.Split.ps1
 - \Expand\Install\Install.Split.ps1
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Install/Install.Split.ps1

• Copy the code

```
Write-host "Split Install.wim into Install.*.swm";

Write-host "Splitting" -NoNewline;

Split-WindowsImage -ImagePath "D:\OS_2022\sources\install.wim" -SplitImagePath
"D:\OS_2022\sources\install.swm" -FileSize "4096" -CheckIntegrity -ErrorAction SilentlyContinue | Out-Null

Write-Host "Split Complete`n" -ForegroundColor Green

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_2022\sources\install.swm" -PathType leaf) {

Remove-Item -Path "D:\OS_2022\sources\install.wim"

Write-Host "Done" -ForegroundColor Green

} else {

Write-Host "Failed" -ForegroundColor Red
```

Yi's Solutions

14.1.2. Merge

After merging all Install.*.swm into Install.wim, delete the old Install.*.swm.

- Install.Merging.ps1
 - o \Expand\Install\Install.Merging.ps1
 - o https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Install.Me rging.ps1

Copy the code

```
Write-host "Merge all Install.*.swm files into Install.wim";
Get-WindowsImage -ImagePath "D:\OS_2022\Sources\install.swm" -ErrorAction SilentlyContinue | ForEach-
Object {
 Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;
 Write-Host "Index Number: " -NoNewline;
                                            Write-Host $_.ImageIndex -ForegroundColor Yellow;
 Write-Host "Exporting".PadRight(28) -NoNewline
 dism /export-image /SourceImageFile:"D:\OS_2022\Sources\install.swm"
/swmfile:"D:\OS_2022\sources\install*.swm" /SourceIndex:"$($_.ImageIndex)"
/DestinationImageFile:"D:\OS_2022\Sources\install.wim" /Compress:"Max" /CheckIntegrity
 Write-Host "Export Complete`n" -ForegroundColor Green
Write-host "`nVerify completion and delete old files"
if (Test-Path -Path "D:\OS_2022\Sources\install.wim" -PathType leaf) {

   Write-Host "Delete: $($_.Fullname)" -ForegroundColor Green
   Remove-Item -Path $_.Fullname
 Write-Host "Done" -ForegroundColor Green
} else {
 Write-Host "Falied" -ForegroundColor Green
```

14.2. Solid compressed ESD format and WIM format conversion

14.2.1. Solid compression

After solid compression, you can edit version information and application files, etc.; you cannot mount images, etc. After obtaining the new file install.esd, delete the old Install.wim.

- Install.Compress.ps1
 - o \Expand\Install\Install.Compress.ps1

o https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Install/Install.Co mpress.ps1

• Copy the code

```
Write-host "Solid compressed Install.wim";

Get-WindowsImage -ImagePath "D:\OS_2022\Sources\install.wim" -ErrorAction SilentlyContinue | ForEach-Object {

Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;

Write-Host "Index Number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow;

Write-Host "Compressing".PadRight(28) -NoNewline

dism /export-image /SourceImageFile: "D:\OS_2022\Sources\install.wim" /SourceIndex: "$($_.ImageIndex)"

/DestinationImageFile: "D:\OS_2022\Sources\install.esd" /Compress:recovery /CheckIntegrity

Write-Host "Compression completed` n" -ForegroundColor Green

}

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_2022\Sources\install.esd" -PathType leaf) {

Remove-Item -Path "D:\OS_2022\Sources\install.wim"

Write-Host "Done" -ForegroundColor Green

} else {

Write-Host "Falied" -ForegroundColor Green
```

14.2.2. Convert compressed files to WIM file format

- Install.Convert.ps1
 - o \Expand\Install\Install.Convert.ps1
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Install/Install.Convert.ps1

Copy the code

```
Write-host "Convert ESD to WIM";

Get-WindowsImage -ImagePath "D:\OS_2022\Sources\install.esd" -ErrorAction SilentlyContinue | ForEach-Object {

Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;

Write-Host "Index Number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow;

Write-Host "Exporting".PadRight(28) -NoNewline

try {

Export-WindowsImage -SourceImagePath "D:\OS_2022\Sources\install.esd" -SourceIndex $_.ImageIndex -
DestinationImagePath "D:\OS_2022\Sources\install.wim" -CompressionType "Max" -CheckIntegrity -ErrorAction
SilentlyContinue | Out-Null
```

Write-Host "Done`n" -ForegroundColor Green

Yi's Solutions

```
} catch {
    Write-Host $_-ForegroundColor Yellow
    Write-host "Falied`n" -ForegroundColor Red
}

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_2022\Sources\install.wim" -PathType leaf) {
    Remove-Item -Path "D:\OS_2022\Sources\install.esd"

    Write-Host "Done" -ForegroundColor Green
} else {
    Write-Host "Falied" -ForegroundColor Green
```

II. Custom encapsulation: boot.wim

1. View Boot.wim details

Image name, image description, image size, architecture, version, index number, etc.;

```
$ViewFile = "D:\OS_2022\Sources\Boot.wim"
```

Get-WindowsImage -ImagePath \$ViewFile | Foreach-Object { Get-WindowsImage -ImagePath \$ViewFile -index \$_.ImageIndex }

2. Specify the path to mount Boot.wim

New-Item -Path "D:\OS_2022_Custom\Boot\Boot\Mount" -ItemType directory

3. Start mounting Boot.wim

Default index number: 2

 $Mount-Windows Image - Image Path "D: \OS_2022 \sources \boot.wim" - Index "2" - Path "D: \OS_2022_Custom \Boot \$

- 4. Language pack
 - Automatically install language packs: Get "Component: All installed packages in the image" and match them. After matching the corresponding names, install the local corresponding language pack files.
 - When adding languages, different schema versions must be corresponded, and if not, errors are reported during the addition process.
 - 4.1. Language pack: add
 - Boot.Instl.lang.ps1
 - o \Expand\Boot\Boot.Instl.lang.ps1
 - o https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/Boot/Boot.Instl.lang.ps1
 - Copy the code

```
$Mount = "D:\OS_2022_Custom\Boot\Boot\Mount"
$Sources = "D:\OS_2022_Custom\Boot\Boot\Language\Add\zh-CN"
$Initl_install_Language_Component = @()
Get-WindowsPackage -Path $Mount | ForEach-Object {
 $Initl_install_Language_Component += $_.PackageName
Add-WindowsPackage -Path $Mount -PackagePath "$($Sources)\WinPE-FontSupport-zh-CN.cab"
$Language = @(

   Write-Host " $($_.PackageName)" -ForegroundColor Green
   Remove-WindowsPackage -Path $Mount -PackageName $_.PackageName | Out-Null
}
```

6. Drive

7. Save image: Boot.wim

 $Save-Windows Image \ -Path \ "D:\OS_2022_Custom \ Boot\ Mount"$

8. Unmount image: Boot.wim

Close any applications that may be accessing files in the image, including File Explorer.

Yi's Solutions

III. Deployment engine

- Learn about "Automatically Adding Languages Installed in Windows Systems", learn: https://github.com/ilikeyi/Multilingual, how to download:
 - After entering the website, click "Code", "Download Compressed Package", and after the download is completed, you will get the main.zip
 compressed package file.
 - Go to the https://github.com/ilikeyi/Multilingual/releases download page, select the available version: 1.1.1.1, select the download source code format: zip, and get the Multilingual-1.1.1.1.zip compressed package file after the download is completed;
- Unzip the downloaded main.zip or Multilingual-1.1.1.1.zip to: D:\Multilingual-1.1.1.1, and rename: D:\Multilingual
- Learn "Unattended Windows Setup Reference", Intervene in the installation process by leaving it unattended.

1. Add method

1.1. Add to ISO installation media

1.1.1. Unattended

1.1.1.1. Add to: [ISO]:\Autounattend.xml

Autounattend.xml interferes with the WinPE installer when booting an ISO installation.

Copy D:\Multilingual_Learn\Unattend\Mul.Unattend.xml to D:\OS_2022\Autounattend.xml

 $\label{lem:copy-ltem} $$\operatorname{D:\Multilingual\Learn\Unattend\Mul.Unattend.xml"-Destination}$$ $$\operatorname{D:\OS_2022\Autounattend.xml"-Force}$$$

1.1.1.2. Add to: [ISO]:\Sources\Unattend.xml

When mounting or unpacking an ISO, after running the [ISO]:\Setup.exe installer, [ISO]:\Sources\Unattend.xml will intervene in the installation process.

 $\textbf{Copy D:} \\ \textbf{Multilingual} \\ \textbf{Learn} \\ \textbf{Unattend.xml to D:} \\ \textbf{OS_2022} \\ \textbf{Sources} \\ \textbf{Unattend.xml to D:} \\ \textbf{Nos_2022} \\ \textbf{Nos_20222} \\ \textbf$

Copy-Item "D:\Multilingual_Learn\Unattend\Mul.Unattend.xml" -Destination "D:\OS_2022\Sources\Unattend.xml" -Force

$\textbf{1.1.1.3.} \qquad \textbf{Add to: [ISO]:} \\ \textbf{SOEM} \\ \textbf{SPanther} \\ \textbf{ISO} \\ \textbf{SOEM} \\ \textbf{SOEM}$

Copy it to the system disk during the installation process, copy to: {system disk}:\Windows\Panther\unattend.xml

1.1.1.3.1. Create \$OEM\$ path

New-Item -Path "D:\OS_2022\sources\` \$OEM\$\` \$\$\Panther" -ItemType Directory

1.1.1.3.2. Copy

Copy D:\Multilingual_Learn\Unattend\Mul.Unattend.xml to D:\OS_2022\Sources\\$OEM\$\Panther\Unattend.xml

 $\label{lem:copy-ltem:cop$

1.1.2. Deployment engine: add

Add "Automatically add installed languages for Windows systems" to D:\OS_2022\sources\\$OEM\$\\$1\Yi\Engine in the directory.

1.1.2.1. Deployment Engine: Copy

Copy D:\Multilingual\Engine to D:\OS_2022\Sources\\$OEM\$\\$1\Yi\Engine

 $\label{lem:copy-lem$

1.1.2.2. Deployment engine: custom deployment tags

ErrorAction SilentlyContinue
```

1.2. Add to mounted

Through "Custom encapsulation: Install.wim", execute "Start mounting Install.wim" and mount to:

D:\OS_2022_Custom\Install\Install\Mount

1.2.1. Unattended

Copy D:\Multilingual_Learn\Unattend\Mul.Unattend.xml to

 $\label{lem:linear_loss} D:\OS_2022_Custom\Install\Install\Mount\Panther\Unattend.xml$

Copy-Item "D:\Multilingual_Learn\Unattend\Mul.Unattend.xml" -Destination

 $"D:\OS_2022_Custom\Install\Install\Mount\Panther"\ -Force$

1.2.2. Deployment engine: add

Add "Automatically add languages installed on Windows systems" to the D:\OS_2022_Custom\Install\Install\Mount\Yi\Engine directory.

1.2.2.1. Deployment Engine: Copy

Copy D:\Multilingual\Engine to D:\OS_2022_Custom\Install\Install\Mount\Yi\Engine

 $\label{lem:copy-lem$

1.2.2.2. Deployment engine: custom deployment tags

\$Flag = @(

"Is_Mark_Sync" # Allow global search and synchronization of deployment tags

- # Prerequisite deployment
- # "Auto_Update" # Allow automatic updates
- # "Use_UTF8" # Beta: Global language support using Unicode UTF-8

"Disable_Network_Location_Wizard" # Network Location Wizard

"Disable_Cleanup_Appx_Tasks" # Appx Cleanup and maintenance tasks

"Disable_Cleanup_On_Demand_Language" # Prevent cleanup of unused on-demand feature language packs

"Disable_Cleanup_Unsed_Language" # Prevent cleaning of unused language packs

"Prerequisites_Reboot" # Restart your computer

- # Complete first deployment
- # "Popup_Engine" # Allow the deployment engine main interface to pop up for the first time
- # "Allow_First_Pre_Experience" # Allow first preview, as planned

 $"Reset_Execution_Policy" \ \# \ Restore \ PowerShell \ execution \ policy: \ Restricted$

"Clear_Solutions" # Delete the entire solution

"Clear_Engine" # Delete the deployment engine and keep the others

"First_Experience_Reboot" # Restart your computer

```
ForEach ($item in $Flag) {

Write-host " $($item)" -ForegroundColor Green

New-Item -Path "D:\OS_2022\sources\`$OEM$\`$1\Yi\Engine\Deploy\Allow" -ItemType Directory -

ErrorAction SilentlyContinue | Out-Null

Out-File -FilePath "D:\OS_2022\sources\`$OEM$\`$1\Yi\Engine\Deploy\Allow\$($item)" -Encoding utf8 -

ErrorAction SilentlyContinue
```

2. Deployment Engine: Advanced

2.1. Deployment engine: adding process

After copying the deployment engine, you can add deployment tags to intervene in the installation process.

2.2. Unattended solution

When the customization is unattended, please modify it simultaneously if the following files exist:

- D:\OS_2022\Autounattend.xml
- D:\OS_2022\Sources\Unattend.xml
- D:\OS_2022\sources\\$OEM\$\\$\$\Panther\unattend.xml
- D:\OS_2022_Custom\Install\Install\Mount\Panther\Unattend.xml

2.2.1. Multilingual or monolingual

In multi-language and monolingual, you can switch between each other. When replacing, please replace all the same ones in the file.

2.2.1.1. Multi-language

```
    <UILanguage>%OSDUILanguage%</UILanguage>
    <InputLocale>%OSDInputLocale%</InputLocale>
    <SystemLocale>%OSDSystemLocale%</SystemLocale>
    <UILanguage>%OSDUILanguage%</UILanguage>
    <UILanguageFallback>%OSDUILanguageFallback%</UILanguageFallback>
```

<UserLocale>%OSDUserLocale%</UserLocale>

2.2.1.2. Monolingual

```
A single language needs to specify a language tag, for example, specify a language tag: zh-CN 

<UILanguage>zh-CN</UILanguage>

<InputLocale>zh-CN</InputLocale>

<SystemLocale>zh-CN</SystemLocale>
```

```
<UILanguage>zh-CN</UILanguage><UILanguageFallback>zh-CN</UILanguageFallback><UserLocale>zh-CN</UserLocale>
```

2.2.2. User plan

By default, the self-created user Administrator is used and logged in automatically. It can be switched by modifying the following configuration: self-created or customized user.

2.2.2.1. Self-created user Administrator

By default, the self-created user: Administrator is used and logged in automatically, inserted between <OOBE> and </OOBE>.

```
<UserAccounts>
 <LocalAccounts>
   <LocalAccount wcm:action="add">
     <Password>
      <Value></Value>
      <PlainText>true</PlainText>
     </Password>
     <Description>Administrator</Description>
    <DisplayName>Administrator</DisplayName>
     <Group>Administrators</Group>
    <Name>Administrator</Name>
   </LocalAccount>
 </LocalAccounts>
</UserAccounts>
<AutoLogon>
 <Password>
   <Value></Value>
   <PlainText>true</PlainText>
 </Password>
 <Enabled>true</Enabled>
 <use><Username>Administrator</Username>
</AutoLogon>
```

2.2.2.2. Custom user

After setting up a custom user and installing the system, in OOBE, you can choose settings such as local and online users.

2.2.2.3. Delete

Username: Removed from start <UserAccounts> to </UserAccounts>

Autologin: Remove from start <AutoLogon> to </AutoLogon>

2.2.2.4. Replace

From the beginning <OOBE> to </OOBE>

<OOBE>

<ProtectYourPC>3</ProtectYourPC>

<HideEULAPage>true</HideEULAPage>

<HideWirelessSetupInOOBE>true</HideWirelessSetupInOOBE>

</OOBE>

D. Generate ISO

1. Download OScdimg

Select the Oscdimg version according to the architecture, and save it to: D:\ after downloading. To save in other paths, please enter the absolute path of OScdimg.exe;

1.1. x64

https://github.com/ilikeyi/Solutions/raw/refs/heads/main/_Encapsulation/Modules/AIO/Oscdimg/amd64/oscdimg.exe

1.2. x86

https://github.com/ilikeyi/Solutions/raw/refs/heads/main/_Encapsulation/Modules/AIO/Oscdimg/x86/oscdimg.exe

1.3. arm64

https://github.com/ilikeyi/Solutions/raw/refs/heads/main/_Encapsulation/Modules/AIO/Oscdimg/arm64/oscdimg.exe

- 2. Use the oscdimg command line to generate an ISO file and save it to: D:\WS2022.iso
 - ISO.ps1
 - o \Expand\ISO.ps1
 - $o \qquad \text{https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.2022/Expand/ISO.ps1}\\$
 - Copy the code

\$Oscdimg = "D:\Oscdimg.exe"

\$ISO = "D:\Win2022"

```
$Volume = "Win2022"

$SaveTo = "D:\Win2022.iso"

$Arguments = @("-m", "-o", "-u2", "-udfver102", "-l""$($Volume)""", "-
bootdata:2#p0,e,b""$($ISO)\boot\etfsboot.com""#pEF,e,b""$($ISO)\efi\microsoft\boot\efisys.bin""", $ISO, $SaveTo)

Start-Process -FilePath $Oscdimg -ArgumentList $Arguments -wait -nonewwindow
```

Chapter 2 Common problem

I. Clean all mounts to

Close any applications that may be accessing files in the image, including File Explorer.

 $Dismount-Windows Image - Path "D: \OS_2022_Custom \Install \Mount" - Discard$

Dismount-WindowsImage -Path "D:\OS_2022_Custom\Install\WinRE\Mount" -Discard

Dismount-WindowsImage -Path "D:\OS_2022_Custom\Boot\Boot\Mount" -Discard

II. Fix the problem of abnormal mounting

1. View mounted

Get-WindowsImage - Mounted

2. Delete the DISM mount record saved in the registry

 $Remove-Item\ -Path\ "HKLM: \ SOFTWARE \ Microsoft \ WIMMount \ Mounted\ Images \ ``-Force\ -Recurse\ -Error \ Action\ Silently \ Continue$

3. Delete all resources associated with the corrupted mounted image

Clear-WindowsCorruptMountPoint

Dism /cleanup-wim

III. Clean up

A large number of temporary files will be generated during the packaging process. Installation files will be temporarily released when installing InBox Apps applications, installing cumulative updates, and installing language packs. Therefore, unscheduled cleaning of outdated ones will occupy a large amount of disk space for a long time. It is recommended that you try the following methods to achieve this. Cleanup plan to free up more space:

1. Common logs

1.1. Clean using the command line

```
$TempPaths = @( $env:Temp; "$($env:SystemRoot)\Logs\DISM"; )

foreach ($TempPath in $TempPaths) {

   if (Test-Path -Path $TempPath) {

     write-host " $($TempPath)" -ForegroundColor Green

   Get-ChildItem -Path $TempPath -Recurse -Force | ForEach-Object {

     try {
```

```
} catch {
    write-host $_-ForegroundColor Red
}
```

1.2. Manual deletion

1.2.1. DISM log

Using the "Disk Cleanup" function, the logs generated by DISM cannot be cleaned and need to be deleted manually. Path: {system disk}:\Windows\Logs\DISM

1.2.2. Temporary directory

Using the "Disk Cleanup" function, files in the temporary directory cannot be cleaned and manual operation is required.

Run: %Temp% to quickly locate and open the temporary directory. Path: {system disk}:\Users\{username}\AppData\Local\ Temp

1.2.3. Clear the command line records of "Terminal"

 $Remove-Item\ - Path\ (Get-PSRead line Option). History Save Path\ - Error Action\ Silently Continue$

After cleaning up command line records, you need to restart the "Terminal" to take effect.

2. Disk cleanup

Run cleanmgr, selecting the disks and types to clean.

Chapter 3 Known issues

1. Add Microsoft-Windows-PowerShell-ISE-FOD-Package~31bf3856ad364e35~amd64~zh-CN~.cab to Windows Server 2022 Standard Core, Windows Server 2022 Datacenter Core will add Microsoft-Windows-PowerShell-ISE-FOD -Package~31bf3856ad364e35~amd64~zh-CN~10.0.20348.1, an error will be reported when deleting it, and the operation is not recommended for the time being.
